Re: Anthropic Fellows Program, AI Safety & Security

Dear Hiring Committee,

I am a PhD candidate in Computer Engineering focusing on hybrid evaluation metrics for Turkish text summarisation. My recent work on LLM-as-a-judge and on trustworthy, explainable AI directly aligns with Anthropic's goal of safe and interpretable systems. At Yozgat Bozok University I lead the Computer Technologies Department and coordinate international academic activities, which has honed my ability to move quickly, work collaboratively, and communicate results clearly.

During my MSc I built evaluation tools for automatic summarisation, and my current research extends these tools to assess hallucinations in clinical texts. This experience gives me a solid grounding in empirical AI research and the practical skills needed to produce public outputs such as papers. My background as a software engineer before 2019 means I am fluent in Python and comfortable with rapid prototyping.

I am motivated to apply my expertise to AI safety and to learn from Anthropic's mentors. The fellowship's focus on fast-paced, full-time research matches my desire to transition into a dedicated research role.

Thank you for considering my application.

Best regards,
Anıl Kuş
