Re: Research Staff, Voice AI Foundations

Dear Hiring Committee,

I am a PhD candidate in Computer Engineering focusing on hybrid evaluation metrics for text summarization and LLM-as-a-judge systems. My work on trustworthy AI and adversarial robustness of explainable AI models gives me a solid grounding in evaluating and improving complex neural systems, which aligns with Deepgram's goal of building robust voice AI foundations.

At Yozgat Bozok University I lead the Computer Technologies Department and coordinate international academic activities. Managing a team, securing collaborations, and co-founding a technology centre have honed my ability to drive research projects from concept to implementation. I have also conducted visiting research at KIT and the University of Turku, exposing me to cutting-edge AI labs.

While I have not yet built neural audio codecs, my experience designing hybrid metrics and evaluating large language models equips me to assess and improve latent representations. I am eager to apply my expertise in evaluation, robustness, and model-centric research to the challenges of latent space modeling for voice AI.

Thank you for considering my application. I look forward to discussing how my background can contribute to Deepgram's innovative research agenda.

Best regards,
Anıl Kuş
